## Understanding Key trends:

Using historical archive data we are able to plot the movement of key data elements.

#### Methodology:

Where data availability allows we are monitoring six elements for key trends: solvency ratio, current ratio, statutory debts, employee figure, scores or rating.Financial trends are based year over year using latest available financial statements or figures, whereas statutory debt comparisons are made quarterly as fresh

information is released. Comparative employee data, typically collected directly from the subject company is therefore triggered by latest to last date of update. As our scores are recalculated on the basis of all fresh information these comparisons will also reflect latest to last date of update position.

#### **PRINCIPALS**

Name:	ADRIAN CONSTANTIN DINU
Position:	Administrator
Nationality:	Romanian
Associations:	Also associated with CREASOFT IT S.R.L., CREATIVE AUTOCURAT S.R.L., G.P.S. UNIVERSAL SRL, ORANGE FRESH UNIVERSAL SRL, SOFTWARE AREA S.R.L.

Maximum of 100 records are displayed.

#### **BANKERS**

Bank Name:	BANCA TRANSILVANIA SA

#### **APPENDICES**

#### **CUSTOMER SERVICE**

Speed of service:	Typically 4 working days	
SCN:	202504115007920207	
Order Date:	Apr 11, 2025	

Should you require any further information or have any questions, please contact your local Customer Service Centre.

Enquiries should **always** contain the below minimum details please:

- Full Company Name
- Full Headquarters Address (street, town, country)
- Telephone Number
- Business Identification Number (registration number, chamber of commerce number, VAT number, Government Gazette number)
- Contact Name
- SCN
- Order Date

The information in this report was last updated on Mar 24, 2025.

#### **D&B RATING GLOSSARY**

# D&B Rating - The D&B Rating consists of two parts, the Financial Strength Indicator and the Risk Indicator.

For example: in the case of a **2A 4** rating, **2A** means the financial strength of the business and **4** is the risk indicator.

The **Risk Indicator** is used in conjunction with the Financial Strength Indicator. The Risk Indicator reflects D&B's opinion of the risk associated with trading with a specific business, notably the likelihood of business continuance or failure over the next 12 months. Created from expert rules systems, the Risk Indicator is refreshed whenever data is loaded onto our databases. Please see the table below for the Risk Indicators and their corresponding values.

#### **Risk Indicators**

4	Significant level of risk	Take suitable assurances before extending credit
3	Greater than average risk	Proceed with transaction but monitor closely
2	Low risk	Proceed with transaction
1	Minimal risk	Proceed with transaction - offer terms required
-	Insufficient information to assign a risk indicator	No public information or D&B proprietary information available to indicate trading activity

The **Financial Strength Indicator** is based on either Net Worth or Issued Capital. The table below contains the possible values.

Financial Strength Indicator		Range	Range		
Net Worth	Capital	FROM	то		
5A	5 <b>A</b> A	\$60 million	And above		
4A	444	\$25 million	\$60 million		
3A	3 <b>A</b> A	\$12 million	\$25 million		
2A	2AA	\$2.5 million	\$12 million		

1A	1AA	\$1.2 million	\$2.5 million
Α	ΑΑ	\$600,000	\$1.2 million
В	BB	\$345,000	\$600,000
С	сс	\$175,000	\$345,000
D	DD	\$120,000	\$175,000
E	EE	\$60,000	\$120,000
F	FF	\$35,000	\$60,000
G	GG	\$15,000	\$35,000
н	нн	0	\$15,000

#### Alternate Ratings Used

Ν	Financial Strength is negative
0	Financial Strength is undisclosed
NB	New Business: Less than 24 months
NQ	Out of Business: Business has ceased to trade

## FINANCIAL RATIO GLOSSARY

Key Business Ratios are used to identify irregularities in the status and future potential of a company.

Name	Formula	Explanation
Current Ratio (x)	Total Current Assets / Total Current Liabilities	This ratio shows the cover by current assets of short term creditors, and the higher the ratio the more assurance there is that payment of creditors can be met.
Solvency Ratio %	((Current Liabilities + Long Term Liabilities) / Tangible Net Worth) x 100	From this can be seen the extent to which the company is financed by creditors and debt rather than permanent finance.
		The higher the ratio the more likely it is that debt (either short term or long term) will be a burden to the company. The effect is higher interest charges, lower profits and a squeeze on liquidity to the disadvantage of creditors.
Fixed Assets to Net Worth (%)	(Total Fixed Assets / Tangible Net Worth)x 100	The proportion of net worth that consists of fixed assets will vary greatly from industry to industry, but in general terms a company is under capitalised if fixed assets exceed net worth. In this case it is

possible that the company has too much debt, and it should therefore be examined with care.

If on the other hand fixed assets are much lower than net worth the company is over capitalised and is either extremely cautious or in a position to expand. thus a ratio either well in excess of the median, or well below it, means that the company should be looked at with care.

Current Liabilities to Net Worth (%)	(Total Current Liabilities / Tangible Net Worth) x100	This contrasts the funds that creditors are temporarily risking with a company with the funds permanently invested by the owners. The higher the ratio the less security for creditors. Care should be exercised when selling to any company with creditors of less than one year exceeding two thirds of net worth.
Asset Turnover (%)	(Turnover / Total Assets(including Intangibles)) x 100	This ratio measures how efficient the company's management has been in generating sales from the assets at its disposal. The measure can vary considerably from industry to industry and should therefore be judged according to the industry norm.
Sales to net working capital (x)	Turnover / Net working capital *	This ratio indicates whether a company is overtrading (handling an excessive volume of sales in relation to working capital). Companies with substantial sales gains often reach a level where their working capital becomes strained.
		Even if they maintain an adequate total investment for the volume being generated (assets to sales) that investment may be so centred in fixed assets or other non-current items that it will be difficult to continue meeting all current obligations. A ratio falling into either an extremely high or low position may indicate potential problems.
Assets to Sales (%)	(Total Assets(including Intagibles) / Turnover) x 100	This correlates sales with the tota investment that is used to generate those sales. By comparing a company's ratio with industry norms it can be be determined whether the business is overtrading or conversely, carrying more assets than needed for its sales volume.
		Abnormally low ratios can indicate overtrading which may lead to financial difficulties if not corrected. Extremely high ratios can be the result of a too conservative management or too low a level of turnover.
Profit Margin (%)	(Profit before Tax / Turnover) x 100	This reveals the profits earned pe pound of sales and therefore measures the efficiency of the operation. This ratio is an indicator of the business'ability to withstand adverse conditions such as falling prices, rising costs or declining sales

		sales
Shareholders' Return (%)	(Profit before Tax / Tangible Net Worth*) x 100	This ratio is used to analyse the ability of the company's management to realise an adequate return on the capital invested by the owners of the business. There is a tendency to look increasingly to this ratio as a final measure of profitability.
		Generally, a relationship of at least 10% is regarded as desirable for providing dividends plus funds for future growth.

(Profit before Tax / Total Assets) x 100	This is the key indicator of profitability for a company it matches operational profits with the assets available to earn a return. Companies using their assets efficiently will have a relative high return while less well run businesses will have a relatively low return
Turnover / Employees	This gives an indication of the efficiency of the labour force. This ratio will vary considerable from industry to industry
Profit before Tax / Employees	This ratio gives a guide as to how effectively the labour force is utilised, and is the best way to measure productivity of labour investment
	100 Turnover / Employees
